TENTS

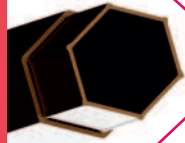

Offer **tents** for 2015

www.bpbohemia.cz

DETAILS

FRAME

The frame of each tent is made of anodised aluminium, which is characterised by its aesthetic appearance and highly durable construction. Hexagonal profiles guarantee high stability of the tent and, by the use of appropriate aluminium profiles, the surface friction is reduced. The frame is resistant to the negative impacts of harsh environments.

MAST

Due to the well-designed construction of the mast, it is possible to eliminate stresses and cracks occurring while setting up. The mast enables quick and simple assembly.

TRANSPORT WHEELS

Wheels mounted to frame make it easy to transport a tent to its location. Wheels are mounted to the pole bases by magnets, which enables easy and screwless assembly and disassembly.

POLE BASE

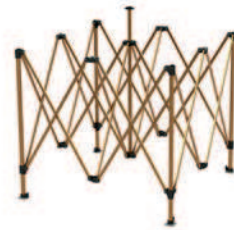

The pole base is square and is made of a composite of plastic and aluminium alloy. Its construction, though modest in size, ensures stability on the ground. Additional stability can be ensured by fixing to the ground with stakes by using the 4 holes in the pole base.

DETAILS

EXTERNAL FIXED BLOCK

The external Fixed Block enables easy and discreet assembly and disassembly of sheeting. The external Fixed Block improves the tension of the fabric and good exposure of the printing. The external Fixed Block is fitted with a patented system of linking to the sheeting by means of the so called "kader".

EXTERNAL SLIDING BLOCK

Allows tent disassembly. It has superior visual quality and is profiled, with an easy to use locking button, which can be operated with your thumb. Due to the lock button, both the assembly and disassembly of the tent is very simple and does not take up your valuable time.

ELASTIC CABLE ORGANISER

Mounted on rectangular or hexagonal profiles, the elastic cable organiser will help you keep work under the tent tidy. It helps to prevent tripping over loose cables or potential failures. Easy assembly and disassembly.

MULTI-PURPOSE CONNECTOR

The connector is mounted with the use of a clamp system. It can be placed on a pole base or a mast. It is used for installing additional accessories, such as a counter, roof, lighting, heaters, half-walls and beach flags. Made of plastic. It does not damage the anodised layer of the tent frame.

DETAILS

BASES

The dedicated bases are suitable for use in different conditions. There are concrete and cast iron bases to choose as well as 20 or 30 kg sand bags.

AWNING

Protection from direct sunlight and rain.

COUNTER

A wooden multifunctional counter may be used in catering tents and where stored equipment must be at hand. It may be used both inside and outside the tent.

HEATER

A heater provides heating inside the tent. It is mounted to the frame by means of the multi-purpose connector.

LIGHTING

Dedicated LED lighting will ensure excellent customer service in your tent even after sunset.
